(54) TELEVISION RECEIVER

(57)Abstract:

PURPOSE: To control a television image receiving circuit with the aid of telesoft transmitted through a telephone circuit by giving a function controlling the television image receiving circuit to the terminal of a character and graphic information system.

CONSTITUTION: A telephone set 5 is connected to a circuit control part 21, and simultaneously a videotex controller 25 is connected to said part 21 through a MODEM 23 and a MODEM controller 24. A videotex mode is indicated through a keyboard 2. Then the information center of the videotex is called through the telephone set 5, and television program information for one month, for instance is received with the aid of the telesoft. In a videotex mode, a display switching circuit 15 is switched to the side of a display memory 26, and the received picture of the videotex, which is stored in said memory, is displayed on a CRT display part 3. When the television program information is transmitted as telesoft from the information center, the videotex controller 25 stores said information in a program memory 16, after which the controller 25 transmits a command to a search circuit 17 and causes said circuit 17 to initialize, and terminates the reception processing of the program information.
